Demo -2: Create and Deploy Apache service over swarm

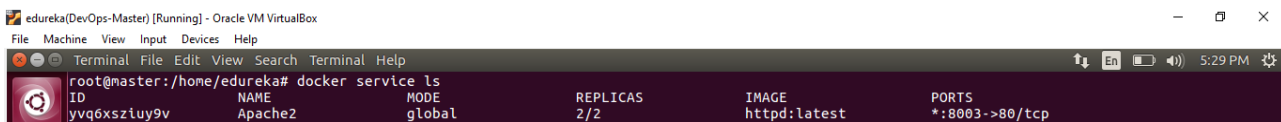

Step 1: Create a service using below command.

```
docker service create --name Apache2 --mode global -d -p 8003:80  
httpd
```

Step 2: Check whether the service has been created or not check the no. of replicas.

```
Docker service ls
```

Step 2: Open your browser and visit address localhost:8003

Step 2: Go to the other node and open its browser and visit address localhost:8003.
