How can we get the list of worker process running in IIS along with the Application pool name ?
(/interviews/show/1438/how-can-we-get-the-list-of-worker-process-running-in-iis-along-with-th)

By running **iisapp.vbs** script from command Prompt.

Below are the steps :
1. *Start > Run > Cmd*
2. Go To Windows > System32
3. Run cscript iisapp.vbs

If there are multiple worker process running on IIS, then how can you attach a particular worker process for application ?
(/interviews/show/1439/if-there-are-multiple-worker-process-running-on-iis-then-how-can-you-a)

Well, If there are multiple worker process running in IIS, it means I have to know the name of my application pool. Then I can run cscript iisapi.vbs script to find out the process ID and Application Pool name . Based on the process Id for particular application I have to attache the process from Visual studio IDE.

Why do we need to IIS Remote Debugging ?
(/interviews/show/1440/why-do-we-need-to-iis-remote-debugging)

There are following reasons where we can use remote debugging
1. Your development server does not have IIS installed.
2. Development server and Build/Released/Hosting Server is different
3. Multiple user want to debug simultaneously.

Does IIS allows multiple user to Remote debug simultaneously ?
(/interviews/show/1441/does-iis-allows-multiple-user-to-remote-debug-simultaneously)

Yes. This is one of the great features of msvsmon.exe . Each instance of the remote debugger has a unique server name.we can give an instance of the remote debugger any server name. Now multiple user can able to access the server instance.
